

Online Voting

Civiti's online voting enables authenticated voters to conveniently cast their vote in any location with any device in a **fast and secure** manner. Our system provides **maximum security and verifiability** to make it equivalent to the standard electoral process.

We provide **confidentiality and security** throughout the voting cycle: from the voting to the vote transmission to the decryption process. **Privacy** is maintained all over the participation process.

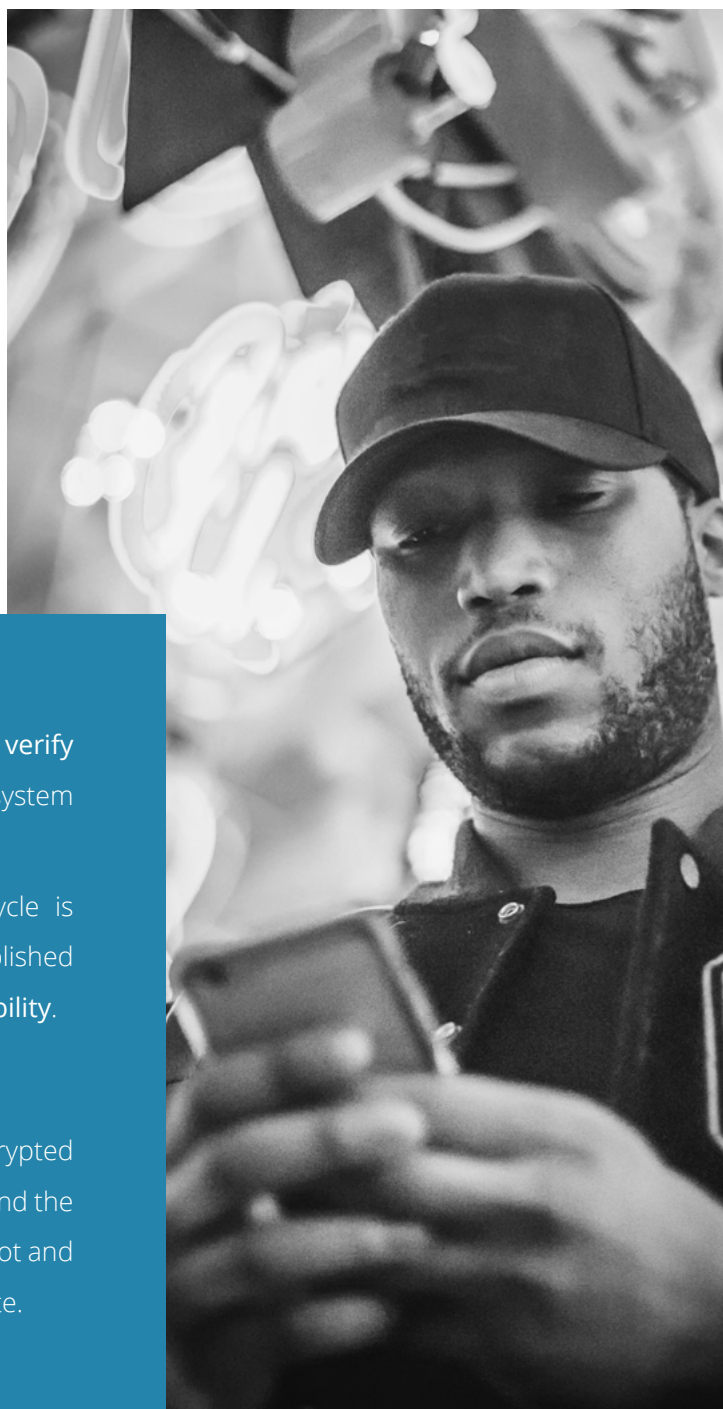

What do we solve?

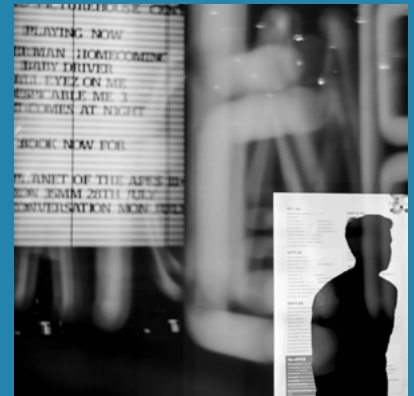

Civiti's online voting technology ensures that **voters can verify their votes** have been correctly cast and counted. The system **encrypts** the votes, ensuring they cannot be altered.

As a consequence, a more accurate and efficient voting cycle is provided. Once the voting period is closed, results are published assuring the **integrity of votes, the auditability and credibility**.

How does it work?

To ensure complete **confidentiality**, the votes are encrypted ensuring they cannot be altered during the transmission and the reception without detection. Voters emit an encrypted ballot and receive a **voting receipt**, allowing the voter to track the vote.

Easy to use

The elector can vote easily from wherever he wants just using any device with an internet connection like a tablet laptop or smartphone. There is **no need to download any program**.

The **voting interface** is really intuitive, allowing users and administrators to surf in the platform quickly and easily. In addition, this product ensures both the **security** of the ballot and the **privacy** of the voters.

Registration & verification

Flexibility and security are key factors for Civiti, including for the registration and verification.

Without deciphering the votes, the voting servers verify their content **validity**. The **integrity** of the ballot box is verified through bulletin boards, digital signatures and mathematical tests. Advanced cryptographic protocols are used. The system provides the **vote** and the **elector secrecy**.

Voting receipts

After casting the vote, the balloter will receive a document called **vote receipt**.

The vote receipt allows the voter to verify if his **ballot has been correctly recorded** by the system. The system ensures these forms a transparent process respecting the **confidentiality** of the voter. Once the election is over, the receipt can be used to **check** if the voter's ballot has been included in the final count.
